

Roller _Sconce

Roller is an indoor and outdoor wall sconce featuring a die-cast aluminum body with laser-cut openings that create different lighting effects. By rotating the body 90°, the lamp can produce either a single upward and downward beam or four separate beams, resulting in a more dynamic and decorative effect. The light source integrates an LED module with dual emission (up/down) at 3000 K, while the IP54 protection rating makes the product suitable for partially exposed outdoor areas. The body is available in four finishes: matte white, matte black, sage, and corten. Installation requires direct connection to the mains. Roller is ideal for façades, entrances, covered outdoor pathways, terraces, as well as indoor corridors and transitional areas. The beam effects created by the laser cuts allow the lamp to function both as a practical lighting solution and as a decorative feature within the project.
